

### **Case Study – Technology Solutions**

Kore Solutions have now completed a large CCTV project for a global oil and gas service company which provides technology, integrated project management and information solutions to customers worldwide.

The Kore Solutions technology team, headed up by Business Manager for Technology Solutions, Colin Cummings was employed to oversee the upgrade and extension of the CCTV system at the global company's Aberdeen site. Moving from an out-dated, black and white analogue system, to a new high tech IP CCTV system.

Although still widely used, analogue CCTV systems are increasingly proving to be regarded as out-dated. Physically, the console operated system is regarded as historical and this particular system had a poor video and image quality making it difficult to identify persons in the grainy video footage.

With a CCTV system no longer fit for purpose, the oil and gas service company decided to upgrade their system and asked for expert support and advice from Kore Solutions. Assessing the needs of the client with regards to security, budget and quality, Kore Solutions recommended that the best way forward for the customer was to upgrade to an IP based CCTV system which not only provides a better image quality, allowing you to identify individuals on screen, but also to watch footage live and on playback. This updated CCTV system also allows the client to expand the system as their requirement increases, with no need for additional controlling hardware or licence upgrades.

The long standing and loyal customer was pleased when Kore Solutions delivered the project within the estimated time scale of just one week, under the supervision of two members of the skilled technology team. Worth around £13,000 the project by Kore Solutions, involved fitting the large Aberdeen site with 18 new, industry leading, high tech security cameras.

Alongside this, Kore Solutions can now also offer a fully integrated IP lighting and IP door access solutions.
